About the data

Observations	1200
Variables	24
Generated with	spicy 0.13.0.9000, R 4.6.1

Counts and percentages are unweighted: they describe the data file and are not estimates for a population.

Notes

Simulated data shipped with *spicy* (`?sochealth`): 1,200 respondents of a fictitious social health survey, built to document the package. Nothing here describes a real population.

Source and citation: <https://amaltawfik.github.io/spicy/> and [doi:10.32614/CRAN.package.spicy](https://doi.org/10.32614/CRAN.package.spicy).

- `weight` is the survey design weight (0.29 to 3.45): the counts of this codebook are **unweighted**.
- `bmi` is in kg/m², and `bmi_category` follows it (normal weight, overweight, obesity).
- The four `life_sat_*` items run from 1 to 5 (Likert scale).
- `response_date` is the time of the interview, Europe/Zurich.
